

Image requirements for MAP online galleries:

Please note that if your images do not comply with these requirements they **WILL NOT BE ACCEPTED**. You are all intelligent adults and should be able to follow simple instructions. A project prefix will be determined – please ask what it is if you do not know.

For ANY Map gallery or image please name your files as follows:

ASB_BloggsF_001.jpg

where ASB represents the project ASBestos, an underscore to separate elements, photographers Surname followed by first letter of their given name, an underscore to separate elements and then a three digit number starting with 001, then 002 etc. This is to be followed by a dot and then jpg.

For the gallery purposes 800 pixels long is what is required as this is a good compromise between file size and quality. Please save images at least quality 8 in Photoshop or at least 80% in Lightroom.

Pictures **NEED** IPTC data included. It is particularly important that photographers provide CAPTION/DESCRIPTON information with their images so that this can be displayed in the galleries.

I plan to be a bastard (again/still) when it comes to rejecting images without IPTC data. NO IPTC, no display, simple really. Same for correct naming. Same for incorrect sizing.

Please email your images to: makesureyourfilesareok@noelb.com

If you can ZIP them into a folder with your name and the project, eg BloggsF_ASB.zip even better!

Please note that if your images do not comply with these requirements they **WILL NOT BE ACCEPTED**.
